

FDI Σ yG[®] Bootloader

Bootloader for the Σ yG Family of products.

Summary

The Σ yG Bootloader is perfect for upgrading your firmware in the field through mediums such as an SD card, USB flash drive, or even over a serial interface such as Ethernet or USB.

The Σ yG Bootloader resides in on-chip flash memory space and takes care of loading your application. It also searches external sources such as an SD card or USB drive for valid application updates. The bootloader will instantly load the application at startup.

The Σ yG Bootloader is thoroughly tested and proven in multiple production units, so you can rest assured that your firmware updates will be flawless.

Features

When updating your product out in the field with the expanded functionality of the Σ yG Bootloader, FDI is your development partner and we can't wait to see what you can do next.

The bootloader occupies 256KB of space in the CPU's internal Flash and is part of FDI's Σ yG product offering and as such is a licensed component that must be purchased from FDI and registered before use. Please consult the Σ yG Software End User License Agreement for complete details.
